

Tube Diffuser

Technical Reference

Dimensions

Туре	Perforation length	Total length	Tube diameter	ID-Sleeve	Perforated area	Total weight
	[mm]	[mm]	[mm]	[mm]	[m ²]	[kg]
TD 63/2100 TD 63/2075 TD 63/2050	1000 750 500	1060 810 560	63 63 63	64 - 66 64 - 66 64 - 66	0,18 0,135 0,09	1,3 1,1 0,8

Other lengths on request.

Dimensions for threads and double nipple:						
Connector	Colour code	Double nipple length square tube 80 x 80 mm [mm]	Double nipple length square tube 100 x 100 mm [mm]	Double nipple length tube DN100 (114,3 mm) [mm]		
1" Whitworth 3/4" Whitworth 3/4" NPT	blue green grey	130 130 -	150 150 -	190 - -		

3/4" NPT-joint: maximal diffuser length 610 mm, diffuser will be connected to 3/4" NPT weld-on threaded nipple. Double nipples for other tube dimensions on request.

Membrane fixing on support tube:

Standard safety clamps (stainless steel 1.4301, SS 304), membrane exchange possible without removing the support tube.

Sealing:

Α

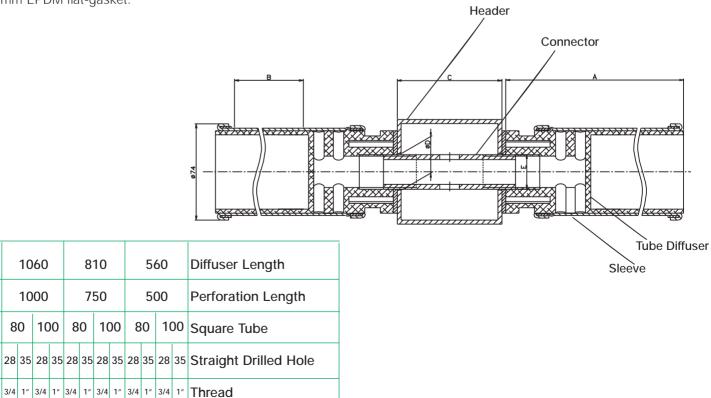

В

С

D

Ε

4 mm EPDM flat-gasket.

Air Flow

Туре	Air flow rate at standard operation conditions	Overload air flow rate	
	$[m_N^3/h]$	[m _N ³ /h]	
63/2100 D 63/2075 D 63/2050 D	3 - 12 2 - 9 1 - 6	20 15 10	

• Air flow rates depending on material, slit pattern etc.

• Other slit patterns on request.

• Shutdown of operation is highly recommended for air flow rates lower than minimum rate.

• Overload air flow rate (e.g. cleaning) should not applied longer than 10 min.

Typical physical properties, measured on cured rubber sleeve:

Membrane Type		Standard EPDM	Plasticizer low EPDM	Silicone
Colour		Black	Black	Translucent
Wall thickness		1,9 mm ± 0,15 mm	1,9 mm ± 0,15 mm	1,5 mm ± 0,2 mm
Diameter		on request	65 mm ± 1 mm	65 mm ± 1,5 mm
Density	DIN 53479	1,09 ± 0,02 g/cm ³	$1,16 \pm 0,02 \text{ g/cm}^3$	1,17 + 0,03 g/cm ³
Tensile Strength	DIN 53504	> 6,0 MPa	> 8,0 MPa	> 8,0 MPa
Elongation at break	DIN 53504	> 400%	> 500%	> 500%
Tear strength	DIN 53507 A	> 6,0 Nm	> 5,0 Nm	~ 38(*) Nm
Hardness	DIN 53505	40 ± 5 Shore A	45 \pm 5 Shore A	60 ± 5 Shore A
Tension set after	100% elongation	< 7%	< 7%	
	24 h, RT			
Operation		0 to 80°C	5 to 80°C	5 to 100°C
temperature range				
Rebound Resilience	DIN 53512	> 50%	> 50%	
Applications		municipal waste water facilities	municipal and industrial waste water facilities	industrial waste water facilities with high load of oils and process related deposits and/or fouling

(*) ASTM D 624 B typical value

Other speciality engineered materials are available on request.

Operation mode:

continuously or intermittent (not recommend for Silicone)

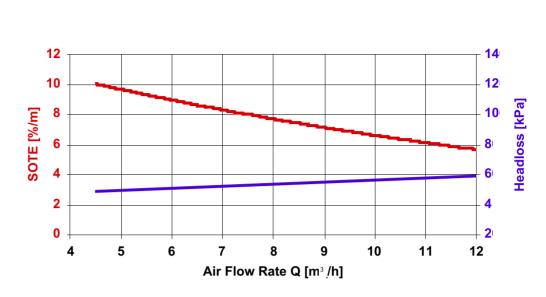

Materials:

Gummi-Jaeger produces different rubber components for the special requirements of various waste waters. The most common material is EPDM, a kind of rubber that is used for a long time in lots of variants in municipal waste water treatment plants.

Also silicone rubber can be used for fine bubble diffusers. But silicone membranes are more sinsitive to all mechan-ical movements. Because of this reason we are using special silicone compounds and also special diffuser design. Furthermore, silicone is more expensive than EPDM, because of the material price.

For all these reasons silicone membranes are a good alternative for the use in all waste waters which damage or destroy EPDM, such as high concentrated grease, oil and hydrocarbons and should only be used there.

For all waste waters with middle and low concentrated grease and oil, it is also possible to use EPDM with low plasticiser content. The normal content of plasticiser is appr. 30%. It can be reduced to 15% for EPDM sleeves and to 10% for disc membranes. This helps to prevent diffuser damages by industrial waste water.

Oxygen transfer efficiency and headloss Tube Diffuser TD 63/2100, low plasticiser membrane

Results depending on tank, size, diffuser disc, slit pattern, material, water depth etc.

Storage:

- Diffuser and/or rubber sleeves must be stored factory-packed in a dark, dry, ventilated and dust-free storage space according to DIN 7716. Avoid frost, heat, UVradiation, dust and working which can cause damage of diffuser and/or packing.
- Do not store outdoors! The storage of rubber parts until installation/starting operation should not exceed one year. At on-site delivery, all rubber and plastics parts must be stored in their original packaging. Crates exposed to direct sunlight must be covered with tarpaulin to protect against UV-radiation.

Cleaning:

Diffusers can only be checked, if the activated sludge tank is out of work and empty. That is why normal cleaning must be done at work. Formic acid is used very successfully against carbonating. To keep the pores open, formic acid is sprayed into the compressed air for a short time. Also a regular use with maximum air flow for a short time helps keeping the diffuser at good conditions for a long time.

Membrane lifetime:

Up to 10 years in municipal waste water treatment plants, depending on waste water influent and operation condition.
